

Incident Investigation Report: MN-DW-03 Mud Losses at 4,222 m MD (illustrative)

Document ID: INC-MN-DW-03-LOSS-4222 | Type: INCIDENT | Well: MN-DW-03 | Date: 2025-02-14

1. Event Identification

- **Well**: MN-DW-03
- **Date & Time**: 11-Feb-2025, 21:15 IST
- **Depth**: 4,222 m MD
- **Event Type**: Annular Overpressure & Formation Breakdown

2. Description of Losses

Drilling ahead at 4,222 m MD with 11.70 ppg mud. Bit entered porous channel facies and ROP spiked to 26 m/hr. Annular cuttings loading increased dynamic ECD from 11.88 ppg to **12.18 ppg**, exceeding the 13-3/8 in shoe FIT of 12.10 ppg.

Returns dropped by 28 bbl/hr. PWD tool confirmed shoe breakdown.

3. Corrective Actions & Recommendations

- Enforce rigid ROP restriction of 12 m/hr during all drilling breaks in 12-1/4 in hole.
- Implement real-time PWD ECD alarm thresholds set 0.10 ppg below shoe FIT.
