

End-of-Well Completion Report Compilation Standard (illustrative)

Document ID: **ONGC-WCR-SOP-09** | Type: **SOP** | Well: **MN-SM-DW-01** | Date: **2026-07-20**

1. Overview

Prescribes the structure, minimum engineering content, and analytical deliverables required for the Well Completion Report (WCR) upon reaching section Total Depth (TD) or final well TD.

2. Standard Document Structure

- **Section 1**: Well Summary Data (coordinates, water depth, spud date, rig specs, casing points).
- **Section 2**: Stratigraphic & Geological Summary (formation tops, lithology descriptions, reservoir evaluation).
- **Section 3**: Drilling Operations Diary (interval-by-interval progress, bit performance, BHA records).
- **Section 4**: Pore Pressure & Geomechanics Review (NCT baselines, Eaton calculations, kick/loss analysis).
- **Section 5**: Mud Performance & Consumption (fluid properties, barite consumption, disposal records).
- **Section 6**: Wellbore Integrity & Safety Events (casing tests, FIT results, MOC logs).
- **Section 7**: Lessons Learned & Best Practices.

3. Data Integrity & Automated Compilation

- Real-time logging data (DLIS/LAS) must be cross-verified against depth frame repositories.
- All non-standard events (e.g. pre-emptive weight-up, ROP capping) must link directly to the corresponding MOC incident memos.
