

Well Completion Report: Mumbai High Precedent Well MH-112 (illustrative)

Document ID: WCR-MH-112 | Type: WCR | Well: MH-112 | Date: 2021-09-14

1. Overview

Historic reference well from Mumbai High Basin documenting severe differential sticking and vuggy carbonate losses under excessive overbalance conditions ($> 400 \text{ psi}$).

2. Relevance to Deepwater Drilling

Serves as an operational reminder that excessive mud overbalance in permeable sands severely amplifies differential sticking risks and torque spikes.
