

Well Completion Report: Offset Reference Well MN-DW-01 (illustrative)

Document ID: WCR-MN-DW-01 | Type: WCR | Well: MN-DW-01 | Date: 2024-04-12

1. Well Summary

- Operator**: ONGC Deepwater Operations.
- Location**: 19.47°N, 87.32°E (3.2 km NW of MN-SM-DW-01).
- Water Depth**: 1,595 m.
- Total Depth**: 4,650 m MD.
- Status**: Safely drilled to TD without significant well-control incidents; plugged and abandoned as an exploration discovery.

2. Geological & Stratigraphic Evaluation

- Encountered Upper Miocene compact marine shale from 3,980 m to 4,145 m MD.
- Transition zone observed at 4,145 m with slight dxc reversal.
- Miocene channel sand entered at 4,188 m MD; sand thickness 75 m net pay with high porosity (22-26%).

3. Drilling Fluid Performance

- 13-3/8 in casing set at 3,820 m MD (FIT 12.15 ppg).
- 12-1/4 in section drilled with 11.30 ppg SOBM.
- Pore pressure in channel sand measured via wireline formation tester at 11.42 ppg.
- Minor connection gas noted (up to 4.2%), no kick sustained.
